

Welcome to Interactive Technologies, a leading manufacturer of lighting control system components that combine intelligent design and robust features to deliver truly useful solutions in a wide variety of applications including entertainment venues, architectural spectacles, corporate shows, high-end residential and virtually everything in between.

This brief Product Guide is an introduction to the range of lighting control products we offer, including Ethernet based lighting controls, DMX-512 products and more.

CueServer™ Web Enabled Show Playback Processor

CueServer is fully integrated show control and playback device that uses the latest web technologies for system programming and operation. CueServer is perfect for many turnkey lighting control applications, such as LED displays, architectural control, retail lighting, amusement attractions, museum kiosks, trade show booths, sign animation, and much more. CueServer provides the perfect combination of powerful control features with unmatched end-user ease-of-use with cost effectiveness.

CueTouch™ Universal Lighting Control Touch Screen

CueTouch is a universal lighting control access point. Use CueTouch to add colorful, easy-to-use on screen controls to virtually any lighting or multimedia control project. Sometimes described as one of the first "internet appliances" for lighting control, CueTouch is a network based LCD touch screen that can be programmed as a self-contained architectural lighting control station or it can be easily integrated into larger systems and used as an operator interface for complex operations.

CueLink™ 2.4 GHz Spread Spectrum Wireless Show Control Bridge

High performance wireless Ethernet specifically designed for professional lighting and show control applications. CueLink wirelessly bridges Ethernet lighting, audio, rigging and other show control networks through the air with an unprecedented range of up to 5 miles (8 km). Built-in intelligent filtering of lighting protocols gives CueLink the ability to significantly out perform any brand of generic wireless Ethernet.

Figment DMX™ 5.1

Lighting Control Software for Palm OS Handheld PDAs

Advanced lighting control software puts the power of an entire console in the palm of your hand. Figment DMX is a new class of handheld moving light consoles that leverages the power and simplicity of the Palm OS™ platform to deliver an unprecedented level of DMX control features in such a tiny package. Figment is the handiest DMX tool for show playback, remote focus, console backup, wireless remote control and much more. Now includes support for optional Bluetooth wireless module for the Sidewinder interface.

Sidewinder DMX™

DMX Playback Interfaces for Figment DMX

The Sidewinder family of products provide the DMX processing power behind the award-winning Figment DMX software for Palm OS PDAs. Two versions of our popular DMX interface are available.

Sidewinder Portable is a “Personal Moving Light Console” small enough to be at your side when you need it. Designed to be the most compact and capable DMX console available for use in applications such as self-contained show playback, remote focus, console backup, DMX troubleshooting and more.

Sidewinder XR is a complete DMX playback solution that’s easy to use and easy on your budget. All of the same features as Sidewinder Portable, but in a ruggedized rack-mountable case with additional front-panel macro buttons, contact closure inputs, AC power input and more.

DMX-To-Go™

Wireless DMX Made Easy

Wireless DMX that’s cost effective, easy to use, small, self-powered and reliable. DMX-To-Go is the perfect solution for wireless lighting control when a project calls for Wireless DMX, but doesn’t have the need or budget for “Rock-and-Roll Tour” wireless lighting packages. Using the latest in advanced long-range Bluetooth wireless technology, DMX-To-Go transmits up to 330 feet (100 m), provides quick response times and reliable operation.

MicroTech DMX™

Handheld DMX Troubleshooting and Remote Focus Tool

Powerful DMX troubleshooting and remote focus functions in a very small package. The MicroTech DMX is designed to be a stage technician’s best friend. It’s loaded with the features needed to solve tricky DMX problems that occur with digital dimmers, moving lights, color scrollers and other DMX controlled equipment. The MicroTech also has several features that make it a handy remote focus tool.
