Software included:
Strand Operating System Guide
Strand ShowNet Designer Remote Software

Small enough to fit with your keys the new 64 Mb USB Designer Remote system along with your Notebook Computer offers quick access to your lighting system

Designer Remote USB Drive

Strand Control Systems

Operation

The Designer Remote Software is stored on a USB memory drive and allows designers to use their notebook as a convenient remote display or even a remote console. Each drive is small enough to fit on a key ring with the rest of your keys and stores a complete set of software for use with Mac OS X or Windows 2000, or XP. Start the software and you can connect to any console and access video displays and if enabled from the console channels and cues. Connections are easy to set up and can be via a conventional wired network or via wireless Ethernet.

Each console display is shown in a separate "Window" and depending on screen size and resolution multiple displays can be shown side by side. A keyboard template is included with each software package to illustrate all of the console key commands on a standard computer keyboard.
